## WHAT WE'RE BUILDING

Your funding will help us expand Redhead's current 25 miles of trails into nearly 40 miles, creating a free multi-use destination for adventurers to enjoy for years to come. The more we can raise today, the more we'll be able to put toward this massive transformation. While some of the actual amenities and their locations may vary from the images below, this shows our vision for Redhead.

Up to 14 more miles of trail through the rocky, sloping backwoods will create new circuits through the park to breathtaking views of the old mining pit - now deep, clear lakes. Gravity-oriented loops and multiple loop options will ensure maximum speed and days of adventure.

To become a world-class destination, we're building trails that allow for competitive events, allowing you to test your skills or watch how the pros take on the unique landscape of Redhead. This means widening portions of our trails to allow for professional leagues and high school mountain bike leagues to hold events at our park.

New trail systems will accommodate trike bikes, hand bikes, tandem bikes, and wheelchair bikes, allowing everyone to experience the thrills Redhead's trails and landscape offer. The same widened trails used for competitive events will accommodate adaptive bikers, creating opportunities for adaptive events in the future.

Water stations, shaded picnic areas, updated signage, bike wash stations, changing stations, outdoor bathrooms, interactive history installations, and other park amenities to ensure a fully accommodating experience to make your adventure one you won't forget.

A paved track, complete with unique mining-themed features will challenge and thrill everyone from beginners to the fastest riders, while showing off the unique history of Redhead Mountain Bike Park. Open for rollerbladers, scooter riders, and adaptive bike users, this track will allow everyone to experience Redhead. The pump track will also provide an opportunity for riders to warm up before hitting the trails.

Catch some air between trail runs in this one-of-a-kind bike park! This space, crafted with features from the existing landscape and historic mining equipment, will create an opportunity for advanced bikers to challenge their technical skills or allow beginner bikers a chance to develop the strength and confidence to take on more challenging trails in Redhead's system.
